Surprisingly versatile, your Woodstock Soapstone direct vent gas stove can be installed almost anywhere and easily vented through a wall or a roof. Whether you do it yourself or use an outside installer, our expert and experienced staff can provide everything from the vent pipe and parts, to helpful advice.

Installation 1 “Up and Out”

Want to design your own kit?
Follow these 4 rules:
1) Your vertical rise should be about 2 times your horizontal run.
2) Maximum horizontal run is 4’
3) Minimum vertical rise is 3’
4) Maximum vertical rise is 20’
Call us with any questions!

Installation 2 “Straight Back with Snorkel”

Want to design your own kit?
Follow these 3 rules:
1) Maximum horizontal run is 4’
2) 48” Snorkel Cap is required
3) Maintain minimum clearance behind stove
Call us with any questions!
1-800-866-4344

Installation 3 “Straight Up”

Want to design your own kit?
Follow the steps below and these 2 rules:
1) Maximum vent height is 24’
2) Height above the roof determined by pitch:
   - Roof Pitch
     - Flat to 6/12: 1’
     - 6/12 to 8/12: 2’
     - 8/12 to 10/12: 3’
     - 10/12 to 12/12: 4’
Call us with any questions!
1-800-866-4344

Designing your own kit is easy. Simply measure the floor to ceiling height where you want the stove, subtract 28” for the stove and elbow height, and choose from the black pipe lengths to reach the ceiling. Galvanized pipe must be used above the ceiling level.
Want to design your own kit? Follow these 3 rules:
1) Maximum vertical rise is 24’
2) Minimum chimney diameter is 6”
3) Maximum horizontal run is 4’
